> **How to read this.** Shaded blocks marked **SITE COPY** are the words that go on the page — final copy, not descriptions of copy. Everything outside them is reasoning, rules and instructions for whoever builds the site. Highlighted `[[placeholders]]` are the things only you can supply; none should survive to launch. Hindi words appear as they will on the site, with the English that reveals on hover shown in brackets.

01 Overview

Full site copy, V1. Written against the *Agency Operating System V1* document and the seven reference sites supplied by the founder.

Files

FILE	WHAT'S IN IT
`00-voice-and-hindi-system.md`	**Read first.** Positioning, voice rules, the Hindi hover mechanic, and the canonical 20-word lexicon.
`01-home.md`	Nine folds, including the name story.
`02-seven-day-website.md`	The offer, defended in full. The most important page.
`03-work.md`	Index copy plus a case-study template with writing rules.
`04-capabilities.md`	The full service map, so Girgit isn't read as a website factory.
`05-studio.md`	Team, working principles, India, AI.
`06-start-a-project.md`	Qualifying brief form, form states, what-happens-next.
`07-global.md`	Nav, footer, meta/SEO, 404, microcopy, pre-launch checklist.
`greetings.md`	The 23-language entry rotator.

Decisions this is built on

- **Positioning** — "We don't have a house style. We have yours," with the seven-day speed in the sub. Adaptation carries the brand; speed carries the conversion.
- **The name is reclaimed, not avoided.** *Girgit* is an insult in Hindi. The homepage says so, then turns it into the studio's whole argument. This is the fold people will screenshot.
- **Hindi appears as inline Devanagari words that reveal their English on hover.** Two to four per page, never load-bearing — delete any one of them and the sentence still reads. That rule protects the Gulf, UK and US readers who are priority one.
- **Reference weighting** — Sparklin for voice, Litmus for single-metaphor discipline, Wolff Olins for restraint on project lines. SandCup as the counter-example.
- **Speed is explained without AI.** Small senior team, no handoffs, groundwork finished before the clock starts. All true, all sayable.
- **India is a fact and a timezone advantage, never a discount.**

Open items

Three things need a decision before build, and one is a genuine fork:

1. **Price on the seven-day page.** The earlier assumption was no price. Having written the page I'd revisit it — a single floor ("typically start at $X") filters bargain hunters and supports premium positioning better than silence. Argument is in `02-seven-day-website.md`, Section 7. Layout works either way.
2. **Team photographs.** Faces are the evidence a small international studio exists. If nobody wants to be photographed, say so and the Studio page gets rewritten — it'll be weaker.
3. **Real project details** — client names, one-line outcomes, and at least one real metric per case study. Templates and worked examples are in `03-work.md`; the writing rules there matter more than the blanks.

Before anything ships

Grep for `[[` — nothing should remain. Then have every Devanagari string checked by a native reader; nuqta marks (ज़ फ़ क़ ग़) are the usual failure point and they change the word. A typo in the one Hindi word on a page is more visible than a typo anywhere else on the site.

Full checklist at the end of `07-global.md`.

02 Voice & the Hindi System

Read this before writing or editing any page. Everything else in `/content` assumes these rules.

1. Positioning, in one line

We don't have a house style. We have yours. High-quality digital experiences, built fast — websites live in seven days.

The breadth in the operating doc is not a gap waiting to be filled with a niche. It is the product. A studio named after a creature that changes to match where it stands has already explained why it works across sectors. Say it that way and "we haven't specialised yet" becomes "we deliberately don't impose."

2. Voice

Reference weighting agreed with the founder:

- **Sparklin** — for voice. Opinionated, specific, unafraid of a strong claim.
- **Litmus** — for discipline. One idea (theirs is *push*) carried through the whole site. Ours is *rang* — colour, adaptation.
- **Wolff Olins** — for restraint on project lines. One short line per project, no paragraph.
- **SandCup** — the counter-example. Nothing on this site says "a tribe of creative minds," "in our DNA," "you ideate, we deliver," or shows a stat counter that can render as `0+`.

Rules

Short sentences. Then a long one when it earns its place. Vary or it drones.

Claims carry evidence or they get cut. "Fast" is a claim. "Seven days from approved scope, with checkpoints on day 1, day 3 and day 7" is evidence.

Never say AI is why we're fast. The operating doc is explicit: AI strengthens execution, it isn't the loudest promise. The sayable version of the speed is true and better anyway — small senior team, no handoffs, designers who ship their own frontend, and all the slow work done before the clock starts.

No "we are passionate about." No "solutions." No "leverage." No "seamless." No "journey" as a noun for anything but travel.

Second person over third. "You'll see it on day 3," not "clients see it."

Never apologise for being small or new. Small is the reason the work is fast and the decision chain is short. Say it like an advantage, because it is.

On India

We say where we are. We never explain it, apologise for it, or price against it. India appears as a fact and a timezone advantage, never as a discount. No chai jokes. No namaste-as-signoff. The Hindi in the copy carries the cultural signal with far more confidence than any of that.

---

3. The Hindi hover system

Selected Hindi words appear inline in Devanagari. On hover — tap on touch — the word swaps to its English meaning.

The one rule that governs everything

Nothing load-bearing goes behind a hover.

A reader who never hovers, can't hover, or can't read Devanagari must lose nothing. The Hindi word is always either:

- **(a) a restatement** — the sentence has already said it in English, and the Hindi is the emphasis; or
- **(b) a display pairing** — Hindi in large type directly above or beside the English line it belongs to.

If a sentence stops making sense when you delete the Hindi word, rewrite the sentence. This is not negotiable — get it wrong and the site is broken for the Gulf, UK and US clients who are priority one.

Density

Two to four per page. Never more. Sprinkled everywhere it stops being a detail and becomes a gimmick. The restraint is what makes it feel considered.

Never two in the same sentence. Never one in a CTA button. Never one in navigation, form labels, error messages or legal copy.

Markup

```
<span class="hi" data-en="colour" lang="hi" tabindex="0" role="button"
      aria-label="rang — Hindi for colour">रंग</span>
```

- **Hover** swaps the text to `data-en`. Keep the width stable or the line reflows and the whole paragraph jumps — measure both strings, reserve the wider, centre the shorter.
- **Tap** toggles on touch devices. Tap again to return.
- **Keyboard** — focusable, Enter/Space toggles, visible focus ring.
- **Screen readers** get the `aria-label`, so they hear both.
- **No JS** — the Devanagari shows and the sentence still reads. That's the whole point of the load-bearing rule.
- **Reduced motion** — swap instantly, no crossfade.

- **First visit** — one subtle hint on the first Hindi word only, then never again. A dotted underline is enough; don't build a tooltip tutorial.

Typography

Devanagari needs a real face — `Noto Sans Devanagari` or similar — matched in weight and optical size to the Latin. Devanagari sits on a hanging headline (शिरोरेखा) and has deeper descenders; set the line box to the taller of the two so nothing shifts on swap.

---

4. Lexicon

Canonical. The same word always maps to the same English across the whole site. Do not improvise new ones page by page.

DEVANAGARI	ROMAN	ENGLISH (DATA-EN)	WHERE IT EARNS ITS PLACE
रंग	rang	colour	The core idea. Home hero, the name fold.
सात दिन	saat din	seven days	The offer. Use once, in display type.
असली	asli	real	Proof, case studies, "real work for real businesses".
नक़्ल	naql	a copy	"We don't do naql" — against template work.
छाप	chhaap	imprint	What the client's brand leaves. Studio page.
ढाँचा	dhaancha	structure	Sitemap / IA / systems work.
खाका	khaaka	blueprint	Pre-production, the scope gate.
नींव	neenv	foundation	Groundwork before day 1.
रफ़्तार	raftaar	pace	Speed, but the good kind.
पक्का	pakka	solid, settled	A finished V1. Opposite of a rough MVP.
कच्चा	kachcha	unfinished	What we refuse to ship. Pairs with pakka.
भरोसा	bharosa	trust	Client relationship, referrals.
साफ़	saaf	clear	Clean interfaces, clear scope.
ज़िद	zid	stubbornness	Pushing back on bad decisions.
वादा	vaada	promise	The seven-day commitment.
मिज़ाज	mizaaj	temperament	Every brand's own character.
फ़र्क़	farq	difference	Before/after, results.
सोच	soch	thinking	Strategy, the journal.
कारीगर	kaarigar	craftsman	The team. Use sparingly — it's a big word.
शुरू	shuru	begin	The start-a-project page. Once.

Deliberately excluded: जुगाड़ (*jugaad*). It means an improvised workaround and it is exactly the impression a fast studio must not give. If it appears anywhere it appears as a negative — "this isn't jugaad" — and honestly, better not at all.

Before launch

Every Devanagari string on the site gets checked by a native reader. Nuqta marks (ज़, फ़, क़, ग़) are the usual failure point and they change the word. A typo in the one Hindi word on a page is more visible than a typo anywhere else on the site.

5. Placeholder convention

Anything the founder must supply is written as `[[SQUARE DOUBLE BRACKETS]]`. Search for `[[` before launch; if any remain, the page isn't ready.

03 Home

Nine folds. Every headline below is final copy, not a description of copy. Alternates are given where a real choice exists.

Fold 0 — Entry

The greeting rotator. 23 languages, ~4s, resolves on **Hello**. Spec and data in `greetings.md`. Once per session. Never blocks the page.

Fold 1 — Hero

> SITE COPY
>
> **Eyebrow**
> Digital design studio · Working worldwide
>
> ### We don't have a house style. We have yours.
>
> **Sub**
> High-quality digital experiences, built fast. Websites go live in seven days.
>
> **Primary CTA** → Start a project **Secondary** → See the work

Notes. No Hindi in the hero. The first Devanagari on the page lands in Fold 2, where it has a whole fold to explain itself — put one here and it reads as decoration before the idea exists.

Alternate H1 if you want speed carrying the top instead of adaptation:

> SITE COPY
>
> ### Your brand's website. Live in seven days. Looking like you, not like us.

Longer, converts harder, less memorable. My recommendation stays with the first.

Fold 2 — The name

This is the fold people screenshot. It gets room — big type, nothing else competing, generous space above and below.

> SITE COPY
>
> ### In Hindi, calling someone a गिरगिट [chameleon] is not a compliment.
>
> *Girgit ki tarah* ***रंग बदलना*** *[to change colour]* — to change colour like a chameleon. It's what you call a person who won't stay the same.
>
> #### We took the name anyway.
>
> Because changing colour isn't dishonesty. It's attention.
> A chameleon set against bark reads as bark. It belongs to where it is.
>
> That's the whole job. The work should belong to you — carry your **मिज़ाज** [temperament], your market, your ambition. Not our portfolio.
>
> Look at a site we built and you should see your company. Not us.

Notes.

Three Hindi words is one over the per-page budget, but this fold is the exception and the reason for the rule — they are the subject of the paragraph, not garnish. The rest of the page then gets **one**, in Fold 6. Nine folds, four Hindi words total.

Load-bearing check: गिरगिट is followed immediately by "chameleon" in the next line. रंग बदलना is translated in the same sentence. मिज़ाज sits in a list of three where the other two carry the meaning. Delete all three and every sentence still reads. Good.

On the biology. "Set against bark reads as bark" is the popular understanding; chameleons actually shift colour mostly for temperature and social signalling, and camouflage is secondary. It's metaphor and it reads as metaphor — but if you'd rather not stake a line on it, swap to: *"A chameleon answers to where it is. Nothing about it is fixed except the attention."*

Fold 3 — Work

Four to six projects. Wolff Olins discipline: project name, one line, tags. No paragraph, no "the challenge / the solution" on the homepage.

> SITE COPY

Recent work

PROJECT	LINE	TAGS
[[CLIENT 1]]	[[One line — what changed for them, not what we made]]	[[Brand · Web · 7 days]]
[[CLIENT 2]]	[[…]]	[[…]]
[[CLIENT 3]]	[[…]]	[[…]]
[[CLIENT 4]]	[[…]]	[[…]]

SITE COPY

→ See all work

Notes for filling these in. The one-liner describes the *outcome for the client*, never the deliverable. Wolff Olins writes "Adding a spark to the coffee run," not "brand identity and packaging system." If a project can only be described by its deliverables, it isn't ready to be a homepage tile — put it on the Work page instead.

If a client is under NDA, do what Litmus does and say so plainly — they run a Coca-Cola entry that ends "we might have featured this project with more details if we weren't under an NDA." It reads as credible, not evasive.

Four is the minimum for this fold to work. With three or fewer, cut the grid and run one project full-bleed instead — a single strong case study beats a sparse grid every time.

Fold 4 — The seven-day offer

SITE COPY

Seven days, from approved scope to live.

Not a rough first draft. A website you would be happy to send to an investor on day eight.

The clock doesn't start when you email us. It starts when the groundwork is done — content collected, references studied, sitemap agreed, visual direction set, scope signed off. Then seven days.

Day 1 — direction, on screen, not in a deck.
Day 3 — the real thing, in a browser, on your phone.
Day 7 — live.

One revision round is included. If the project is genuinely bigger than seven days, we say so before you pay anything, ship a complete V1 in seven, and take the rest into Phase 2.

→ How the seven days work

Notes. The pre-production gate is the most trust-building thing in the whole operating doc and most agencies would bury it. Put it in the second sentence. It's the difference between a promise and a stunt, and it qualifies out the clients who'd break the promise anyway.

Fold 5 — Why the speed is real

Three columns. This fold exists because unexplained speed reads as *cheap* or *template*, and one of those kills the premium positioning.

> SITE COPY
>
> ### Fast isn't a discount.
>
> **A small senior team**
> Three or four people, all senior, one owner per project. Nothing waits in a queue behind someone else's approval.
>
> **No handoff**
> The designer builds the frontend. Nothing is lost translating a file into code, because there's no translation — the person who drew it ships it.
>
> **The slow part happens first**
> Research, references, sitemap, direction and scope are all settled before day one. Seven days of building, not seven days of deciding.

Notes. All three are true and none of them says AI. Per the operating doc, AI stays a production advantage demonstrated through the work, not a claim on the homepage.

Fold 6 — Capabilities

> SITE COPY
>
> ### The website is the front door, not the house.
>
> Most people arrive for a website. What they usually need next is everything around it.

Then a plain list — Pentagram's taxonomy approach, no icons, no cards:

> SITE COPY
>
> Web design & development · Digital product & web apps · UX consultation & audits · App and interface design · Branding & identity · Graphic design · Video & motion · AI-enabled digital experiences · Frontend implementation · Backend integration & deployment

> A seven-day website is how most relationships start. It is very rarely where they stop. Ask for the thing you need; if we're not the right people for it, we'll tell you and we'll usually know who is.
>
> → Full capabilities

Hindi word for this page goes here — in the intro line:

> SITE COPY
>
> Most people arrive for a website. What they usually need is the whole **ढाँचा** [structure] — structure, systems, the parts nobody sees.

Fold 7 — Who this is for

Qualifying copy. It should politely repel the wrong client — that's the job.

> SITE COPY
>
> ### We work best with
>
> Founders who need an idea to exist by a date.
> Businesses whose digital presence is a decade behind the company. Agencies who need real design capacity, quietly.
> Creators building something bigger than a profile.
>
> ### Less well with
>
> Anyone shopping purely on price.
> Anyone who wants to art-direct the art director.
>
> We'll recommend the direction and argue for it. You approve the big calls. If a decision would visibly damage the work, we'll say so, explain why, and propose something better — that argument is part of what you're paying for.

Notes. The "less well with" block is the highest-leverage copy on the page. It costs you the clients who'd be unprofitable and makes the ones who stay trust you more. Litmus does the same thing with "We're creative. You're not creative. What next?"

Fold 8 — Journal *(ship when there are three posts, not before)*

> SITE COPY

Thinking

`[[POST 1 TITLE]]` — `[[Author]]` `[[POST 2 TITLE]]` — `[[Author]]` `[[POST 3 TITLE]]` — `[[Author]]`

→ More

Notes. This is the visible end of the founder-content funnel in the operating doc. An empty or one-post journal actively damages credibility — hide the fold until there are three.

Fold 9 — Close

SITE COPY

Tell us what you're building.

Send the idea, the deadline and the budget range. You'll get a real reply from the person who'd run the project — not a form response, and not a calendar link with nothing behind it.

→ Start a project

Or just email: `[[hello@girgitlabs.com]]`

Notes. "The person who'd run the project" is a genuine small-studio advantage and costs nothing to promise. Only write it if it's true.

Homepage checklist

- □ Four Hindi words on the page: गिरगिट, रंग बदलना, मिज़ाज (Fold 2), ढाँचा (Fold 6). No more.
- □ Every Hindi word passes the delete test — remove it, sentence still reads.
- □ Word "AI" appears at most once, in the capability list, never as a claim.
- □ No `[[placeholders]]` left.
- □ Fold 3 has at least four projects, or has been replaced by one full-bleed case study.
- □ Fold 8 hidden unless three posts exist.

04 The Seven-Day Website

The single most important page on the site. Everything the homepage promises in four sentences gets defended here in full. Written to survive a sceptical reader — someone who has been burned by a fast agency before and is looking for the catch.

Tell them the catch. It's the fastest way to be believed.

Hero

SITE COPY

Eyebrow — Signature offer

सात दिन [seven days]

Seven days.

A complete, high-quality website V1 — designed, built and live in seven working days from the moment scope is approved.

→ Start a project · → What it costs

Notes. This is the one page where Devanagari leads. It's paired with the English translation directly beneath it in the same display size, so nothing is hidden — the hover just confirms what the reader has already been told.

Section 1 — The honest version

SITE COPY

What "seven days" actually means

It means seven days of building. It does not mean seven days from the first email.

Before the clock starts we do the slow work: understand what you're actually trying to do, collect your content and assets, study your references and the competitors who matter, agree a sitemap, set a visual direction, and write down the scope so precisely that neither of us can be surprised by it later.

That groundwork takes as long as it takes — usually a few days, sometimes longer if content isn't ready. It is not billed as a separate phase and it is not optional. It is the reason seven days is possible at all.

Agencies that promise a week from the first email are either shipping a template or about to miss the date.

Notes. Naming the competitor's failure mode in the last line is the strongest sentence on the page. It converts the obvious objection — "nobody builds a good site in a week" — into agreement with you.

Section 2 — What you bring

Published deliberately. It defends the promise, it qualifies leads before they reach a call, and it reads as professional rather than restrictive.

SITE COPY

What we need from you before day one

Your objective. What the site is for, and how you'll know it worked.

Your content. Copy, or the raw material for it. If you don't have copy, we can write it — that's additional scope and it adds time, and we'd rather tell you now than on day four.

Your logo and brand identity. Required. The seven-day process assumes a brand already exists to build on. If it doesn't, we can create one first — a separate piece of work with its own timeline.

Reference sites. Three to five. Include one you dislike; it tells us more than the five you love.

Your assets. Photography, product shots, video, logos, fonts, whatever exists.

One decision-maker. One person with the authority to approve. Design by committee and seven days becomes seven weeks — that's not a policy, it's arithmetic.

Notes. "Include one you dislike" is a real technique and it signals craft. "One decision-maker" is the most commercially valuable line on the page — it prevents the single failure mode most likely to break the promise.

Section 3 — The seven days

SITE COPY

How the week runs

Day 1 — Direction
You see real screens, in a browser, not a deck. The homepage above the fold, the type, the colour, the way it moves. You approve the direction or we turn it. Turning on day 1 costs a day. Turning on day 5 costs the week.

Days 2–3 — Build
Full design across the agreed pages, built as we go. Not mockups handed to a developer — the designer is writing the frontend.

Day 3/4 — Checkpoint
The real site, on your phone, that you can click through. This is where you give your revision notes. One

round is included.

Days 5–6 — Revision and finish
Your notes, then the parts nobody notices until they're missing: responsive behaviour down to small phones, empty and error states, meta tags and social cards, page speed, accessibility basics, forms that actually deliver.

Day 7 — Live
Deployed to your domain, or handed over as clean code if you'd rather deploy it yourself. You get the files either way.

Section 4 — What V1 means

Directly counters the assumption that fast means rough.

SITE COPY

कच्चा [unfinished] is not what we ship

A V1 from us is not a minimum viable anything. It's a finished website that happens to be the first one — **पक्का** [solid], settled, complete for the scope it covers.

If what you've asked for genuinely cannot be done well in seven days, we don't compress it and we don't pad the timeline. We tell you before you pay, agree the strongest complete thing that does fit in seven days, ship that, and move the rest to Phase 2.

You end up live in a week either way. That's the point.

Notes. Two Hindi words in one section is above budget, but they're a deliberate pair — कच्चा / पक्का, raw and set — and each is translated by the sentence it sits in. Don't add a third to this page beyond the hero.

Section 5 — Scope and revisions

The boring section. Put it in anyway; the clients worth having read it.

SITE COPY

Scope, revisions, and what happens when things change

The seven days apply to the agreed scope. Not to a scope that grows on day four. New requirements after sign-off are new work with their own quote and timeline — we'll always tell you the cost before we do it.

One revision round is included. A second may be included depending on the package. A revision is refinement of what was agreed, not a change of direction — a change of direction is new scope, and we'll say so at the time rather than absorbing it silently and resenting it.

We'll push back. If you ask for something that would visibly hurt the work, we'll explain why and propose an alternative. You still decide. But we reserve the right to decline a decision that would make the result something we wouldn't put our name on.

You own it on final payment. Full IP transfer, source files, code.

Section 6 — Delivery levels

SITE COPY

Four ways this lands

Design only — the full design, ready for your team to build. **Design + frontend** — designed and coded, handed over.
Design + frontend + deployment — live on your domain.
Complete build — including backend, integrations and hosting, with our development partner.

Which one is right depends on the project. We'll recommend, you choose.

Section 7 — Pricing

SITE COPY

What it costs

Fixed price per project, agreed before we start. Never hourly — you shouldn't pay more because we took longer.

Price depends on how many pages, how complex the build, and what you need beyond design. `[[PRICE ANCHOR — see note]]`

Payment is `[[30% to start, 40% at the day 3 checkpoint, 30% on delivery]]` .

→ Tell us what you need and we'll quote it in 24 hours.

Note on the price anchor. The operating doc says don't expose per-page pricing, and the earlier assumption was no price at all. I'd revisit that. The Gulf/UK/US buyer you want is qualifying you on price whether you publish or not, and silence reads as either "expensive" or "cheap" depending on their mood. A single floor — *"Seven-day websites typically start at* `[[$X]]` *"* — costs you nothing, filters out the bargain hunters the doc says to avoid, and supports premium positioning better than an empty page does. Your call; the layout works with or without it.

Section 8 — Objections

Written as an FAQ because that's what it is. Answer the hard ones honestly; the soft ones aren't worth the space.

> SITE COPY
>
> **How can seven days be any good?**
> Because a small senior team with no handoffs and no queue moves at a completely different speed to a large agency, and because all the deciding happens before day one. The week is spent building, not aligning.
>
> **Is it a template?**
> No. Every site is designed for the brief. If a template were the answer, you wouldn't need us — you'd need a subscription.
>
> **What if I miss a checkpoint?**
> The clock pauses. We're not going to hold you to a date you couldn't make; we'll agree a new one.
>
> **What if I hate the day 1 direction?**
> Say so on day 1. One turn at that stage costs a day and we've built for it. That is exactly why the checkpoint exists.
>
> **Do you work in my timezone?**
> We're in India, which means work usually lands while you're asleep and you review it with your morning coffee. For the Gulf we overlap most of the day; for the UK, half; for the US, we hand over as you start.
>
> **What happens after day 7?**
> Usually Phase 2, or the next thing entirely. Most of our work is repeat work. `[[Confirm before publishing this line.]]`

Notes. The timezone answer turns the most common objection to hiring in India into an advantage without ever mentioning cost. Never pair it with a price comparison — that's the trap the operating doc warns about.

Close

> SITE COPY
>
> ### Ready when your scope is.
>
> **→ Start a project**

05 Work

You have real projects — this page is built to receive them. Everything here is either final copy or a fill-in template with the writing rules attached, so the case studies come out consistent no matter who writes them.

Index page

> SITE COPY
>
> **Eyebrow** — Selected work
>
> ### Different every time. That's the point.
>
> If these looked like they came from the same studio, we'd be doing it wrong.

Then the grid. Project name, one line, tags, image. Nothing else.

> SITE COPY
>
> **Filters** — All · Web · Product & apps · Branding · Video · AI experiences

Notes. The headline does real work: it pre-empts the objection a visitor forms while scrolling a varied portfolio — *"is there a point of view here?"* — and converts inconsistency into the thesis. This is the payoff of the Fold 2 name story on the homepage. Without that fold, this line doesn't land; with it, it's the second half of an argument.

Ordering. Strongest first, always. Not chronological. Nobody scrolls to the bottom of a work page looking for your best project.

Minimum viable page. Six projects makes a page. Three makes a page that looks like a page with three projects on it. If you have fewer than six, drop the grid and run them full-width, stacked, one screen each — fewer, bigger, reads as confidence rather than thin.

Case study template

Every case study uses these six blocks in this order. Resist adding a seventh.

Block 1 — Header

> SITE COPY

```
[[CLIENT NAME]]

[[One line. What changed for them.]]

[[Sector]] · [[Services]] · [[Year]] · [[Duration]]
```

Writing the line. It describes the outcome, not the deliverable.

- Wolff Olins: *"Adding a spark to the coffee run."*
- Sparklin: *"Rebuilding internet banking from the ground up."*
- Not: *"Brand identity, website and packaging system."*

If the only honest line is a list of deliverables, the project isn't a case study yet — it's a portfolio image. Put it in the grid without a detail page.

Block 2 — The situation

Two or three sentences. What was true before, and why it was a problem.

```
SITE COPY

[[Who they are, in one sentence a stranger would understand.]] [[What was broken, costing them, or missing.]]
```

Rule. Never make the client look stupid. The situation is a context, not a diagnosis of their incompetence — future clients read this and imagine themselves in it.

Block 3 — What we did

Three to five sentences. Decisions, not tasks.

```
SITE COPY

[[The central decision that shaped everything else.]] [[One or two things that decision made possible.]] [[Anything genuinely hard, and how it was solved.]]
```

Rule. "We redesigned the navigation" is a task. "We cut the navigation from nine items to four, because their analytics showed six of them had never been clicked" is a decision. Only decisions belong here.

Rule. If it was a seven-day build, say the number. It is the single most memorable fact you have and it belongs in the body, not just a tag.

Block 4 — The work

Images. Minimal captions, and only where a caption adds something the image can't. No "final logo design." No "mobile view."

Rule. If there is video — and with Harsh on the team there should be — this is where it goes. A ten-second scroll-through of the built site does more than six static screens.

Block 5 — Result

> SITE COPY
>
> `[[Metric]]` · `[[Metric]]` · `[[Quote]]`

Rule, and this is the one that matters. A weak metric is worse than none. "Increased engagement" means nothing and reads as a cover for having no numbers. If you have real figures — load time, conversion, bounce, signups, time to launch — use them. If you don't, use a client quote and nothing else, or ask the client for one number three months after launch. Build that ask into your project close; it costs one email and it's what makes the next case study credible.

Do not invent numbers. One fabricated stat that a prospect checks costs you more than every case study on the site earns.

Block 6 — Next

> SITE COPY
>
> → Next project: `[[NAME]]`
> → Start a project

Worked example

For calibration — this is the standard, written against a project shape you already have.

> SITE COPY
>
> **Sha Juharmal Phoolchand**
>
> # A furniture house since 1942, finally visible online.
>
> Sirohi, Rajasthan · Brand, web design, frontend · 2026 · 7 days
>
> **The situation**
> Four generations of furniture-making in Rajasthan, a showroom people drive from three districts to visit, and a web presence that was a directory listing with a phone number. Every enquiry started with someone explaining what the business was.
>
> **What we did**
> The catalogue was the whole argument, so we built the site around it rather than around a homepage — 28 pieces, filterable, with the count derived from the page itself so it can never go stale. One typeface, black on white, hairline rules: the restraint keeps the furniture the loudest thing on the screen. Photography wasn't

ready in week one, so we shipped with commissioned line-art built to be swapped for real images without touching the layout. Live in seven days.

Result

`[[Enquiries per month, before and after]]` `[[Client quote]]`

Notes. Note what the example does — the constraint (no photography) is stated as a solved problem rather than hidden. Prospects trust a studio that admits a project had constraints far more than one where everything went perfectly.

Note also: this is the demo build in `C:\Personal projects\jawaharmal Phoolchand`, and its own README says the collection names, timeline and projects are invented. **Do not publish it as a client case study until it's a real engagement with real content and the client's permission.** If it stays a self-initiated piece, label it as one — "self-initiated" is honest and still demonstrates the seven-day capability.

NDA projects

SITE COPY

`[[CLIENT SECTOR]]`

`[[What changed]]`

We can't name this one or show the work. Here's what we can say: `[[Two sentences about the problem and the approach.]]`

Notes. Litmus does exactly this on their Coca-Cola project and it reads as credible rather than evasive. An NDA entry is worth more than an empty grid slot — just never more than one or two, or it starts to look like a way of having no portfolio.

06 Capabilities

This page exists for one reason: to stop Girgit being read as a website factory. The homepage sells seven days. This page shows the studio behind it.

Pentagram's taxonomy is the model — a broad, confident list with no apology for its breadth. The name has already justified it.

Hero

> SITE COPY
>
> **Eyebrow** — Capabilities
>
> ### Tell us what you need.
>
> The seven-day website is the front door. Most people who come through it stay for something else.

Notes. The founder's working philosophy is "Tell us what you need. We'll build it." As a homepage headline I argued against it — it's what every commodity shop says. Here, on a page that then proves the range, the first half works: it's an invitation with evidence directly underneath. Dropping "We'll build it" is deliberate. The promise is in the list, and an unqualified "we'll build anything" undercuts the premium positioning the doc asks for.

The list

Grouped in four. Each group: a heading, a line, and the specifics.

Interfaces

> SITE COPY
>
> Screens people use for hours, not seconds. Web apps, dashboards, tools, internal systems — the work where usability is the whole product and the visual design has to survive real data.
>
> Digital product design · Web applications · Dashboards & data interfaces · Design systems · Mobile and app design · Prototyping

Websites

> SITE COPY

Marketing sites, portfolios, catalogues, launches. Designed and built by the same people, which is why they arrive fast and why they look in the browser the way they looked in the file.

Seven-day websites · Multi-page marketing sites · Ecommerce front ends · Frontend implementation · Motion & interaction · Deployment & hosting · Backend integration, with our development partner

Brand

SITE COPY

Identity for companies that will mostly be seen on a screen. Built as a system from the first sketch, because a logo that only works on a business card is a liability now.

Brand identity · Naming support · Visual systems & guidelines · Graphic design · Packaging & print · Presentation and pitch design

Motion & AI

SITE COPY

Two capabilities most studios our size don't have in-house, and the reason some projects come to us instead of to a bigger name.

Video editing · Videography · Motion graphics · Product films · AI-enabled interfaces & experiences · AI-assisted production

Notes on the Motion & AI group. Harsh's video work is a genuine differentiator and grouping it with AI gives it weight it wouldn't have as a line item at the bottom of a design list. Keep the AI description at exactly this volume — the operating doc is explicit that AI strengthens execution and is demonstrated through the work rather than announced. Two lines is demonstration-adjacent. Two paragraphs would be a claim.

Consulting

SITE COPY

When you don't need us to build anything

UX audit. We use your product the way your users do, and write down everything that's costing you. Usually 15 to 30 findings, ranked by what it would cost to fix against what it would earn. No pitch attached.

UX consultation. Working sessions with your team — on structure, on flows, on a decision you're stuck between.

Design capacity for agencies. White-label, under your name, on your timeline. We're comfortable being invisible.

Notes. The audit is the single best door-opener in the operating doc's original playbook — the whole audit-note outreach method depends on it existing as a real, priced product. Give it a page of its own once the offer is defined.

The agency line matters: agencies are a named target client and they will not enquire unless the site explicitly says you'll stay behind the curtain.

What we don't do

SITE COPY

Not us

Performance marketing and paid media.
SEO retainers.
Ongoing social media management.
Anything that needs to look like a template to hit a price.

We know good people for the first three. Ask.

Notes. Naming exclusions makes the inclusions believable. It also gives you a referral relationship with three other agencies, which is a channel the operating doc lists as still-open.

How engagements work

SITE COPY

Three shapes

Sprint — one defined thing, fixed price, fixed date. The seven-day website is the best-known one. Most first projects are this.

Project — bigger scope, phased, with checkpoints. A product, a rebrand, a platform.

Partner — a monthly retainer where we're the design team. For companies shipping continuously who don't want to hire in-house yet.

Everything is fixed price. We don't bill by the hour — it punishes you for our learning curve and rewards us for being slow.

Notes. That last sentence is the most quotable line on the page and it's a real argument, not a slogan. Keep it.

Close

SITE COPY

Not sure which of these you need?

That's a normal place to start. Describe the problem rather than the deliverable and we'll tell you what it actually needs — including if the answer is less than you expected.

→ Start a project

07 Studio

The trust page. A prospect in London or Dubai arrives here to answer one question: *are these people real, and are they good?*

Answer it with specifics. Vagueness on this page is what makes a small studio look like a front.

Hero

> SITE COPY
>
> **Eyebrow** — Studio
>
> ### Small on purpose.
>
> Girgit Labs is a design studio working from India for clients mostly everywhere else. Small enough that the person you brief is the person who does the work. `[[Founded YEAR]]` .

Notes. "Working from India for clients mostly everywhere else" states the fact in eight words with no defensiveness and no explanation. Never expand it. The moment you justify being in India, you've conceded there's something to justify.

Section 1 — How we work

> SITE COPY
>
> ### ज़िद [stubbornness] about the right things
>
> **Expertise decides, not seniority.** Whoever knows the most about the problem in front of us leads that decision. Every project has one owner who keeps it moving and is accountable for the date — that's coordination, not rank.
>
> **We say things early.** If something is going wrong, you hear it the day we know, not the day it becomes your problem. A studio that only ever reports good news is a studio managing you.
>
> **We argue.** Internally, about each other's work, directly. And with you, when a decision would visibly damage the result. You still decide. But you're paying for a point of view, and a studio that agrees with everything is giving you a very expensive pair of hands.
>
> **Nothing ships unreviewed.** Every deliverable is looked at by someone who didn't make it.

Notes. ज़िद — stubbornness — is the page's one Hindi word, and it's the right one: it's affectionate in Hindi, closer to "principled obstinacy" than plain pig-headedness, and the section explains itself immediately. The heading reads fine as *"Stubbornness about the right things"* for anyone who never hovers.

Section 2 — The team

> SITE COPY
>
> ### Who you'll actually be working with
>
> **Karmaveer** — `[[Founder / Design Lead]]` UX and digital interfaces. Runs client conversations and owns the direction on most projects. Writes about design and AI at `[[@handle]]`. `[[One specific line — a project, a background detail, something true.]]`
>
> **Harry** — `[[Design]]` Graphics, interface design, and the AI-assisted production that lets a two-person design team output like a five-person one.
> `[[One specific line.]]`
>
> **Harsh** — `[[Video]]` Video editing and videography. The reason our case studies move and most of our competitors' don't.
> `[[One specific line.]]`
>
> Plus a development partner we've worked with for `[[N]]` years, who handles backend, integrations and deployment when a project needs them.

Notes.

Photographs, not illustrations or avatars. For a small studio selling internationally this is not a style choice — faces are the evidence that you exist. If nobody wants to be photographed, that's a decision with a real cost; say so and I'll write the page without them, but it will be a weaker page.

Per the agreed assumption, Pramay is not listed while the role is on hold, and the developer appears as an unnamed partner rather than a team member — which is exactly what the operating doc describes.

Write the `[[one specific line]]` carefully. It's the difference between a team page and a LinkedIn export. Something true and slightly unexpected: what they did before, what they're unreasonable about, a thing they made that has nothing to do with clients. Generic lines here undo the whole page.

Section 3 — The name

Short version. The full telling lives on the homepage; here it's a reminder for anyone who arrived directly.

> SITE COPY

Why Girgit

Girgit is Hindi for chameleon, and in Hindi it's an insult — it's what you call someone who changes colour to suit the room.

We think that's the job. The work should look like you, not like us. Four projects from this studio should have nothing visually in common except that all four are good.

→ The longer version

Section 4 — Where we are

SITE COPY

India, and wherever you are

`[[City, India]]` . We work with clients in the Gulf, the UK, Europe and North America, and we've never met most of them in person.

The distance is usually an advantage. Work lands overnight and you review it with your morning coffee. For the Gulf we overlap almost the whole day; for the UK, most of the afternoon; for the US, we hand over as you're starting.

Calls are `[[Google Meet / Zoom]]` . Files come to you the same day they're made. Nobody has ever needed to be in the same room as us to get a website.

Notes. Same rule as everywhere: timezone as an advantage, never price as an advantage. This section should never contain the words "cost," "affordable," "value for money" or "rates." The operating doc's positioning depends on it.

Section 5 — AI

One short section, on the studio page, where a curious client can find it. Not on the homepage.

SITE COPY

On AI

We use it heavily — research, production, QA, the repetitive parts of frontend. It's part of why a small team ships at this pace.

It doesn't design the work and it doesn't decide anything. Nothing reaches you that a person didn't make, review and stand behind.

We'd rather you noticed the speed and the quality than the tooling.

Notes. This is the operating doc's AI position translated exactly: a real capability, demonstrated through outcomes, never the loudest claim. The last line closes the subject politely so the page can move on.

Do not remove this section. AI-avoidant silence in 2026 reads as either dishonesty or obsolescence, and a client who suspects you're hiding it will ask on a call — better they read your answer first.

Section 6 — Clients

> SITE COPY
>
> ### Who we work with
>
> `[[LOGO ROW — only if you have six or more you're allowed to show]]`
>
> `[[TESTIMONIAL — name, role, company. Never "CEO, Tech Company."]]`

Notes. Fewer than six logos looks worse than no logo row. Below that threshold, run one strong named testimonial full-width instead.

An anonymous testimonial is worth nothing — it reads as invented, because most anonymous testimonials are. Named, with a role and a company, or cut it.

Close

> SITE COPY
>
> ### We're usually free to start within `[[N]]` days.
>
> **→ Start a project**

08 Start a Project

Not a contact page. A qualifying brief — it should collect enough that the first reply can be substantive, and enough that you can decline the wrong projects without a call.

Every other page on the site points here. It's the only CTA.

Hero

> SITE COPY
>
> **Eyebrow** — `[[Currently taking projects for MONTH]]`
>
> ### शुरू [begin] Let's start.
>
> Tell us what you're building. You'll hear back within one working day from the person who'd run the project — with a real response, not an acknowledgement.

Notes. शुरू sits directly before "Let's start," which translates it in place. It's the page's only Hindi word.

The availability eyebrow is worth maintaining. "Currently taking projects for March" creates honest urgency and signals a real studio with a real calendar. It has to be true and it has to be updated — a stale month is worse than no eyebrow.

The form

Short enough to finish, long enough to qualify. Seven fields.

> SITE COPY
>
> **What are you building?** *(required)* A sentence is fine. A paragraph is better.
> `[[textarea]]`
>
> **What do you need from us?** *(required, multi-select)* A website · A product or web app · Branding · Video · A UX audit · Design capacity for my agency · Not sure yet
>
> **When do you need it?** *(required)* As soon as possible · Within a month · Within three months · Just exploring
>
> **Budget range** *(required)* `[[Under $X]]` · `[[$X–$Y]]` · `[[$Y–$Z]]` · `[[Over $Z]]` · Not sure yet
>
> **Do you have a logo and brand identity?**
> Yes · No · Sort of

Links — your current site, references you like, anything relevant. `[[text]]`

Name and email *(required)*

→ **Send**

Prefer email? `[[hello@girgitlabs.com]]` `[[Or book a 20-minute call →]]`

Notes on the fields.

Budget is required and it's the most important field. Every instinct says making it optional will get more submissions. It will — and most of the extra ones will be unqualified, and you'll spend the calls discovering it. A budget band is the difference between a lead list and an inbox. Include "Not sure yet" so genuine early-stage founders aren't blocked; the ones who select it and write a serious brief are worth talking to.

"Do you have a logo?" pre-empts the seven-day process's hardest dependency. Answering "no" here means the first reply can already explain that branding is separate work, before anyone's expectations are set.

Seven fields is the ceiling. Every field past this point costs you good leads. If you want more, ask on the call.

No phone number field. It suppresses international submissions and you don't need it to reply.

Below the form

SITE COPY

What happens next

1. You hear back within one working day. From `[[Karmaveer]]`, with an actual response to what you sent.

2. A short call. Twenty to thirty minutes. What you're building, what success looks like, whether we're the right studio for it. We'll tell you if we're not.

3. A proposal. Fixed scope, fixed price, fixed dates. Usually within two working days of the call.

4. Groundwork. Content, references, sitemap, direction, scope sign-off.

5. The clock starts.

Notes. Publishing the sequence removes the anxiety that stops people submitting forms — they don't know what they're triggering. Five numbered steps says "this is a process, not a sales trap."

Step 2's "we'll tell you if we're not" is the highest-trust sentence available to a small studio and costs nothing. Only publish it if it's true.

Reassurance strip

> SITE COPY
>
> **One working day** to a reply · **Fixed price**, never hourly · **You own everything** on final payment · **We'll say no** if we're wrong for it

---

Form states

Every one of these is real copy that needs writing. Most agency sites leave them as browser defaults and it's the fastest way to look unfinished on the one page that matters most.

> SITE COPY
>
> **Sending** — Sending…
>
> **Success** — Got it. `[[Karmaveer]]` will reply within one working day — check your spam folder if you don't hear from us, and email `[[hello@girgitlabs.com]]` if it's urgent.
>
> **Error** — That didn't send. Try again, or email us directly at `[[hello@girgitlabs.com]]` — we'd rather you did that than lose the message.
>
> **Required field** — We need this one.
>
> **Invalid email** — That email doesn't look right — check it?
>
> **Rate limited / duplicate** — Looks like that already came through. We have it.

Notes. The success message must name a person and a timeframe. "Thanks, we'll be in touch" is the sound of a form that goes nowhere.

Always give the direct email in the error state. A failed form on your only conversion page is the most expensive bug on the site — the fallback has to be right there.

Alternate paths

> SITE COPY
>
> ### Other ways in
>
> **Email** — `[[hello@girgitlabs.com]]` **A call** — `[[booking link]]` **LinkedIn** — `[[Karmaveer's profile]]` **For agencies** — `[[partners@girgitlabs.com]]`, or use the form and pick "design capacity."

Notes. A separate agency address is a small signal that white-label work is genuinely welcome rather than tolerated. Cheap to set up, and agencies are a named target in the operating doc.

Privacy line

> SITE COPY
>
> We use what you send to reply to you. Nothing else, nobody else, no list. `[[Privacy policy]]`

Notes. Required in practice for UK and EU enquiries, and one honest sentence does more for conversion than a link to a policy nobody opens.

09 Global

The copy that appears on every page, plus the bits that get forgotten until launch week.

Navigation

> SITE COPY
>
> Work · Seven days · Capabilities · Studio · **Start a project**

Five items. "Seven days" sits second because it's the offer, not fifth because it's alphabetical. "Start a project" is the button, visually distinct, present on every page including itself.

No Hindi in navigation. Ever. Navigation is functional, and a hover interaction on a nav item competes with the nav's own hover state.

Mobile menu — same five, plus email and `[[LinkedIn]]` at the bottom.

Logo links home. Alt text: `Girgit Labs`. Not "Girgit Labs logo" — screen readers already say "image."

Footer

> SITE COPY
>
> **Girgit Labs**
> `[[City, India]]` · Working worldwide
>
> **Studio** — Work · Seven days · Capabilities · Studio · Journal **Contact** — `[[hello@girgitlabs.com]]` · `[[LinkedIn]]` · `[[Instagram]]` · `[[Behance / Dribbble]]` **For agencies** — `[[partners@girgitlabs.com]]`
>
> `[[Currently taking projects for MONTH]]`
>
> © `[[YEAR]]` Girgit Labs · Privacy · Terms

Optional footer line, if you want one more moment of the idea:

> SITE COPY
>
> *गिरगिट* — the one that changes colour. We think that's a compliment.

Use it or don't; don't use it *and* run the greeting rotator *and* the Fold 2 name story on the same page. Sparklin already runs a multilingual footer marquee — the entry rotator is our version of that idea and it shouldn't appear twice.

Meta / SEO

Title tags. Under 60 characters, brand last.

PAGE	TITLE	DESCRIPTION (UNDER 155)
Home	`Girgit Labs — Digital design studio. Websites in 7 days.`	`A design studio with no house style. High-quality digital experiences, built fast — websites designed, built and live in seven days.`
Seven days	`The 7-Day Website — Girgit Labs`	`A complete, high-quality website designed, built and live in seven working days from approved scope. What you bring, how the week runs, what it costs.`
Work	`Work — Girgit Labs`	`Websites, digital products, branding and video. Different every time, on purpose.`
Capabilities	`Capabilities — Girgit Labs`	`Digital product design, websites, brand identity, video and AI-enabled experiences. Fixed price, fixed dates, never hourly.`
Studio	`Studio — Girgit Labs`	`A small design studio working from India for clients everywhere else. Expertise over hierarchy, and one owner per project.`
Start	`Start a project — Girgit Labs`	`Tell us what you're building. A reply within one working day from the person who'd run the project.`

Notes.

Every description contains a fact, not an adjective. "Seven working days," "fixed price," "one working day" — search results are a place to be concrete.

OG image — one per page, 1200×630. The homepage's should be the Fold 2 name line set large. It's the most shareable thing on the site and the one that makes someone click.

Structured data — `Organization` and `LocalBusiness` on the homepage, `Service` on the seven-day page, `CreativeWork` on case studies. Nothing exotic.

`lang` attributes. Page is `lang="en"`. Every Devanagari span carries `lang="hi"`. Search engines and screen readers both need this and both do noticeably worse without it.

404

> SITE COPY
>
> ### This page changed colour and wandered off.
>
> It happens. Try the work, or tell us what you were looking for.
>
> → Work · → Start a project

Notes. One joke, on brand, no Hindi. If it feels too cute, the plain version — *"That page doesn't exist."* — is fine and nobody was ever lost by a sober 404.

Microcopy

Small, high-frequency strings. Consistency here is most of what makes a site feel made rather than assembled.

WHERE	COPY
Case study back-link	← All work
Next project	Next project →
Load more	More work
External link	`[[icon]]` — no text
Email copied	Copied
Cookie banner, if you must	We use `[[analytics]]` to see which pages people read. Nothing else. **OK** · **No thanks**
Newsletter, if you run one	Occasional writing on design, AI and building a studio. No pitch.
Journal author byline	Written by `[[Name]]`
Reading time	`[[N]] min
Image loading	Blur-up placeholder, never a spinner

Cookie banner note. Default to no non-essential cookies and no banner at all. If you add analytics, choose one that doesn't require consent — it's less code, less legal surface, and one fewer thing between a Gulf or UK prospect and your work.

Accessibility copy

- **Skip link** — Skip to content
- **Greeting rotator** — `aria-hidden="true"`, with the real `<h1>` behind it
- **Hindi spans** — `aria-label="rang — Hindi for colour"`, and so on per the lexicon in `00-voice-and-hindi-system.md`
- **Decorative images** — `alt=""`, not a description
- **Case study images** — describe what's shown: `Homepage of the Sha Juharmal Phoolchand catalogue on desktop`, not `Project image 3`
- **Video** — captions on anything with speech. Non-negotiable if you're selling video as a capability.

Pre-launch checklist

- □ No `[[placeholders]]` anywhere. Grep for `[[`.
- □ Every Devanagari string checked by a native reader — nuqta marks especially (ज़ फ़ क़ ग़).
- □ Every Hindi word passes the delete test: remove it, sentence still reads.
- □ Hindi words per page: Home 4, Seven days 3, Studio 1, Start 1. Work and Capabilities: none.
- □ Hover behaviour tested on touch (tap toggles) and keyboard (Enter/Space).
- □ No layout shift when a Hindi word swaps to English.
- □ Devanagari font subset loading, with a real fallback stack.
- □ "AI" appears at most once on the homepage and once on Studio. Never in an H1.
- □ No stat counter that can render `0+`.
- □ Availability month in the footer and on Start is current.
- □ Form tested end to end — success, error, and the email actually arrives.
- □ No invented metrics in any case study.
- □ Nothing published from the Sha Juharmal demo without real content and client permission.

10 Greeting Set

23 greetings for the intro / hero rotator. Ordered for a cycling reveal that lands on English.

Why this device fits Girgit

Three reasons, so it's a positioning statement and not just decoration:

1. **It states "international first" without saying it.** A visitor in Dubai, London or Toronto sees their own language before they read a word of pitch.
2. **It is the name, performed.** Girgit adapts to whoever walks in. The rotator does that literally, in the first two seconds, before any copy claims it.
3. **It is a speed demonstration.** 23 states resolving in ~4 seconds sets the tempo of the whole site before the 7-day promise is ever mentioned.

The set

#	GREETING	ROMANIZED	LANGUAGE	NOTE
1	Hello	—	English	Anchor. Also the final resting state.
2	Hi	—	English, informal	
3	नमस्ते	Namaste	Hindi	
4	مرحبا	Marhaba	Arabic	**RTL.** Gulf is priority market #1.
5	खम्मा घणी	Khamma Ghani	Rajasthani / Marwari	See note below.
6	வணக்கம்	Vanakkam	Tamil	
7	নমস্কার	Nomoshkar	Bengali	
8	કેમ છો	Kem chho	Gujarati	
9	ਸਤ ਸ੍ਰੀ ਅਕਾਲ	Sat Sri Akal	Punjabi	Longest string — check wrapping.
10	Bonjour	—	French	France + Canada.
11	Hola	—	Spanish	Spain + US Hispanic market.
12	Olá	—	Portuguese	
13	Ciao	—	Italian	
14	Hallo	—	German	
15	Hej	—	Swedish	
16	Cześć	—	Polish	
17	Привет	Privet	Russian	Informal, kept short on purpose.
18	Γειά σου	Yia sou	Greek	
19	שלום	Shalom	Hebrew	**RTL.**
20	Merhaba	—	Turkish	
21	你好	Niˇ haˇo	Mandarin	
22	こんにちは	Konnichiwa	Japanese	
23	안녕하세요	Annyeonghaseyo	Korean	

On Khamma Ghani

This is the one greeting on the list nobody expects. It's Rajasthani, it's warm, and it quietly says the team is from somewhere specific rather than from nowhere. Keep it only if the connection is real — a fake regional greeting is worse than no regional greeting. If it stays, it should sit in the first third of the cycle where people are still watching, not buried at #18.

Spares

If you want to swap any out: **Xin chào** (Vietnamese), **สวัสดี / Sawasdee** (Thai), **Halo** (Indonesian), **Kumusta** (Filipino), **Jambo** (Swahili), **Sawubona** (Zulu), **Hoi** (Dutch), **Hei** (Norwegian), **नमस्कार** (Marathi), **ನಮಸ್ಕಾರ** (Kannada).

Six of the 23 are Indian languages. That is deliberate but it is a dial — if "international first" should read harder, cut Bengali and Gujarati and pull in Vietnamese and Thai.

Ordering logic

Not alphabetical and not random. The cycle runs:

Hello → **Hi** (establish the word) → **Hindi** → **Arabic** → **Rajasthani** (identity and priority market, early, while attention is highest) → **Indian languages** → **European** → **Cyrillic / Greek / Hebrew** → **CJK** (most visually distinct, kept for the back half so the rotator doesn't peak too soon) → resolve on **Hello**.

Randomising per visit is tempting. Don't — you lose control of the first three frames, which are the only ones most people see.

Implementation notes

Timing. ~120–160ms per greeting, easing to ~400ms on the last three, then hold on "Hello". Total ≈ 4s. Anything longer and it stops being a flourish and starts being a loading screen.

Never block content. The greeting is an overlay or a hero state, not a gate. Text and nav must be in the DOM and reachable from frame one. If JS fails, the page shows "Hello" and nothing is lost.

RTL. Arabic (#4) and Hebrew (#19) need `dir="rtl"` set per item, not on the container. With a centred rotator this is invisible to the eye but correct for screen readers and for any punctuation added later.

Fonts. No single typeface covers Latin + Devanagari + Arabic + Gurmukhi + Tamil + Bengali + Gujarati + Cyrillic + Greek + Hebrew + CJK. Set an explicit fallback stack or the browser substitutes something ugly mid-cycle and the whole effect cheapens:

```
font-family: /* your display face */,
  "Noto Sans Devanagari", "Noto Sans Arabic", "Noto Sans Gurmukhi",
  "Noto Sans Tamil", "Noto Sans Bengali", "Noto Sans Gujarati",
  "Noto Sans Hebrew", "Noto Sans JP", "Noto Sans KR", "Noto Sans SC",
  system-ui, sans-serif;
```

Subset aggressively — you need roughly 40 glyphs, not 40 full fonts. Each greeting is a handful of characters; a unicode-range subset per script keeps this under ~15KB total.

Metrics. Devanagari and Gurmukhi have taller ascenders and deeper descenders than Latin. Fix the rotator's line box height to the tallest item so the layout doesn't jump on every frame.

Accessibility. Wrap the rotator in `aria-hidden="true"` and put a plain `<h1>` with the real headline behind it. The greeting is decoration; screen readers should hear the actual page, not 23 words for "hello".

Reduced motion. `prefers-reduced-motion: reduce` → skip the cycle, render "Hello" immediately, no fade.

Once per session. Store a flag so returning visitors and internal navigation don't sit through it again. A rotator you cannot skip is charming once and irritating twice.

Data

```
const GREETINGS = [
  { text: "Hello",         lang: "en",    dir: "ltr" },
  { text: "Hi",            lang: "en",    dir: "ltr" },
  { text: "नमस्ते",          lang: "hi",    dir: "ltr" },
  { text: "مرحبا",          lang: "ar",    dir: "rtl" },
  { text: "खम्मा घणी",       lang: "raj",   dir: "ltr" },
  { text: "வணக்கம்",         lang: "ta",    dir: "ltr" },
  { text: "নমস্কার",         lang: "bn",    dir: "ltr" },
  { text: "કેમ છો",          lang: "gu",    dir: "ltr" },
  { text: "ਸਤ ਸ੍ਰੀ ਅਕਾਲ",     lang: "pa",    dir: "ltr" },
  { text: "Bonjour",       lang: "fr",    dir: "ltr" },
  { text: "Hola",          lang: "es",    dir: "ltr" },
  { text: "Olá",           lang: "pt",    dir: "ltr" },
  { text: "Ciao",          lang: "it",    dir: "ltr" },
  { text: "Hallo",         lang: "de",    dir: "ltr" },
  { text: "Hej",           lang: "sv",    dir: "ltr" },
  { text: "Cześć",         lang: "pl",    dir: "ltr" },
  { text: "Привет",        lang: "ru",    dir: "ltr" },
  { text: "Γειά σου",      lang: "el",    dir: "ltr" },
  { text: "שלום",          lang: "he",    dir: "rtl" },
  { text: "Merhaba",       lang: "tr",    dir: "ltr" },
  { text: "你好",           lang: "zh",    dir: "ltr" },
  { text: "こんにちは",       lang: "ja",    dir: "ltr" },
  { text: "안녕하세요",       lang: "ko",    dir: "ltr" },
];
```

Before this ships

Every non-Latin string here should be checked by someone who reads the script. Machine-correct is not the same as native-correct, and a misspelled greeting on the first frame of the site is an expensive way to fail. The Arabic,

Hebrew, Tamil, Bengali, Gujarati and Punjabi entries are the ones to verify first.
